Manufactured by

Overview

- A CO₂ insufflator for endoscopy is a medical device that delivers carbon dioxide gas to create a clear field of vision during minimally invasive procedures, ensuring patient safety and improved visualization for accurate diagnoses.
- Its controlled gas delivery minimizes complications and discomfort, making it an essential tool in various endoscopic applications.
- Gas delivery minimizes complications and discomfort, making it an essential tool in various endoscopic applications.

Features

- Easy and Reliable Operation
- Compact design
- Gas: CO₂ (carbon dioxide)
- Minimal pain during procedure with fast recovery
- CO₂ absorption property by human tissue
- 150 times faster than air
- Compatible with All Major brand endoscopes like Fujifilm, Olympus and Pentax
- Compatible both centralized and Cylinder

- **Maintaining Clear Vision:** CO₂ helps to displace blood and other bodily fluids, ensuring a clear view of the target area for the endoscope.
- **Reducing Complications:** CO₂ is readily absorbed by the body, minimizing the risk of gas embolism or other complications associated with other insulation gases like air.
